M74ALS138P

3-LINE TO 8-LINE DECODER/DEMULTIPLEXER

T-66-21-55

DESCRIPTION

The M74ALS138P is a semiconductor integrated circuit of a 3-line-to-8-line decoder/demultiplexer with enable inputs.

FEATURES

- Three types of enable inputs
- 4 to 16 decoder/demultiplexer capability without adding external components
- Wide operating temperature range ($T_a = -20 \sim +75°C$)

APPLICATION

General purpose, for use in industrial and consumer digital equipment.

FUNCTIONAL DESCRIPTION

Using as a decoder, give the address in 3-bit binary code on inputs $D_A \sim D_C$, and one output among outputs $\overline{Y_0} \sim \overline{Y_7}$ corresponding to the address is low and the other seven outputs are all high. In this case, enable input E_1 is set high and enable inputs $\overline{E_2}$ and $\overline{E_3}$ are set low. When E_1, $\overline{E_2}$ and $\overline{E_3}$ are in any other condition, the outputs are high irrespective of the status of $D_A \sim D_C$.

When the device is used as a demultiplexer, it functions as a 1-line-to-8-line demultiplexer by making E_1, $\overline{E_2}$ and $\overline{E_3}$ the data inputs and $D_a \sim D_C$ the selection inputs.
In addition to the features of this device the M74ALS137P and M74ALS131P offer an address latch function and an address register function respectively.

Note 2: Measurement circuit

(1) The pulse generator (PG) has the following characteristics:

PRR ≦ 1MHz

$t_r=2ns$, $t_f=2ns$

$V_{IH}=3.5V$, $V_{IL}=0.3V$

duty cycle = 50%
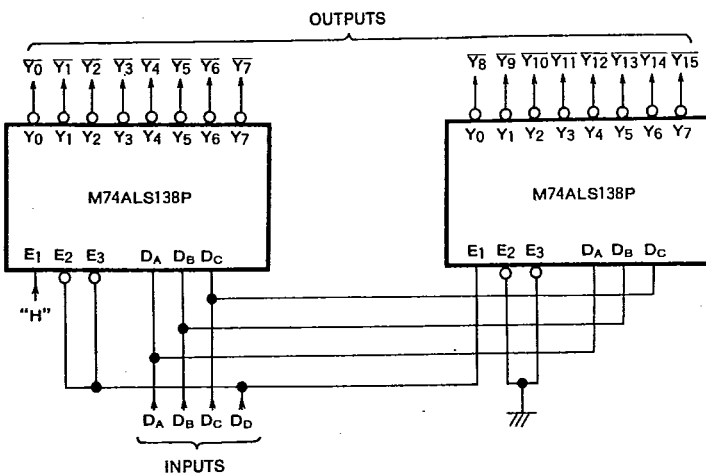

$Z_O=50\Omega$

(2) C_L includes probe and jig capacitance.
